4.11 Creating Queries in MS Access ★ Golden

LEARN IT

A query retrieves, filters and analyses data **without changing the original tables**. A simple SELECT query:

1. Create tab → Query Design.
2. Show Table → add Student → Close.
3. Double-click the fields you want; they drop into the grid.
4. Red Run (!) button executes it.

Criteria restrict rows. Type a value in the Criteria row under a field.

Goal	Where to type	Example
Single criterion	Criteria row, one column	Department → "Computer Science"
AND (both must match)	Same Criteria row, two columns	Name "Ali" and Department "Computer Science"
OR (either may match)	Criteria row and the or: row	Department "IT" or "Computer Science"

Wildcards in Access: * = any characters, ? = one character. Like "A*" finds Ali, Ahmed, Ayesha.

WORKED EXAMPLE

Equivalent SQL (what Access writes behind the grid):

```
SELECT StudentName, Department
FROM Student
WHERE Department = "Computer Science";

SELECT StudentName, Department
FROM Student
WHERE StudentName = "Ali" AND Department = "Computer Science";

SELECT StudentName, Department
FROM Student
WHERE Department = "IT" OR Department = "Computer Science";
```

EXAM TIP

Remember: AND = same row in the grid; OR = different rows. Examiners draw a blank grid and ask you to fill Criteria and or:.

COMMON MISTAKE

Text criteria need quotes: "IT". Numbers do not: ≥ 80. Mixing these is a common cause of empty results.

اردو میں سمجھیں

کوئری ٹیبل کو بدلے بغیر سوال پوچھتی ہے۔ ایک شرط Criteria قطار میں، AND ایک ہی قطار کی دو کالموں میں، OR الگ قطار (or:) میں۔ وائلڈ کارڈ * کئی حروف، ? ایک حرف۔

CHECK YOURSELF

1. Criteria for marks at least 80?
2. You want CS or IT. Same row or two rows?

Answers: 1. ≥ 80 under Marks. 2. Two rows (OR).
