1.2.4 The Agile Model ★ Golden

LEARN IT

The **Agile model** is an **iterative** approach: the software is built in small, repeated cycles called **sprints** (usually 2–4 weeks long). Each sprint plans, builds and tests a small part of the software, and then shows it to the customer. **Customer feedback is gathered continuously** and used in the next sprint.

Plan → Design → Build → Test → Review & feedback → Next sprint ↺

When to use it

- Requirements are unclear or may change.
- The customer wants frequent progress updates (early delivery).
- The project is complex or innovative.

Advantages (Pros)	Disadvantages (Cons)
Highly flexible to changes.	Less documentation.
Early delivery of working software.	Unpredictable end-time and cost.

WORKED EXAMPLE

Case study: Al-Noor Student Mobile Application. This app used Agile because teachers, parents and students **constantly requested new features** during development.

Sprint 1 (2 weeks): build login and the timetable screen. Show it to users.

Feedback: parents ask, "Can we see attendance too?"

Sprint 2: add attendance. Teachers now ask for homework notifications.

Sprint 3: add notifications. Each sprint delivers a working app, and new ideas are welcomed instead of causing a restart.

REMEMBER IT

Agile = agile athlete: quick and able to change direction. Think of making a pizza where the customer tastes each slice and you adjust the next one.

COMMON MISTAKE

"Less documentation" does not mean "no documentation" or "no planning". Agile teams still plan every sprint; they simply value working software over long documents.

ایجائل (Agile) ماڈل میں سافٹ ویئر چھوٹے چھوٹے ادوار میں بنتا ہے جنہیں اسپرنٹ (Sprint) کہتے ہیں، جو عموماً دو سے چار ہفتے کے ہوتے ہیں۔ ہر اسپرنٹ کے بعد گاہک کی رائے لی جاتی ہے۔ یہ تبدیلیوں کے لیے بہت لچکدار ہے اور جلد کام کرنے والا سافٹ ویئر دیتا ہے، مگر اس میں دستاویزات کم ہوتی ہیں اور وقت و لاگت کا اندازہ مشکل ہوتا ہے۔ انور اسٹوڈنٹ موبائل ایپ اس کی مثال ہے۔

EXAM TIP

Questions ask you to define Agile, explain sprints, list pros/cons, or say when to use it. Always mention the words "iterative", "sprints (2–4 weeks)" and "continuous customer feedback". Use the Al-Noor Student Mobile App as your case study.

CHECK YOURSELF

1. What is a sprint and how long does it usually last?
2. Give one disadvantage of Agile.

Answers: 1. A short development cycle that delivers a working part of the software; usually 2–4 weeks. 2. Less documentation, or unpredictable end-time and cost.
