CS XI

Chapter 4: Data and Analysis

Lecture 11 of 15

4.9 Creation of Tables in Microsoft Access

LEARN IT

Plan first (4.9.1): purpose, field list, data type of each field, which field is the PK.

Datasheet View (4.9.2) — fast, spreadsheet-like, good for beginners, weak on rules.

1. Create tab → Table.
2. A blank grid appears.
3. Double-click Field1, Field2, ... to rename.
4. Type data; Access guesses the data type.

Limitation: you cannot easily say "Marks cannot exceed 100". Professionals use Design View.

Design View (4.9.3) — full control before any data is typed.

1. Create tab → Table Design.
2. Type each Field Name (StudentID, Name, ...).
3. Pick the Data Type from the dropdown.
4. Right-click the unique field → Primary Key (key icon).
5. Save the table.

Data type	Use it for
Short Text	Names, addresses, phone numbers (you do not add phone numbers). Up to 255 characters.
Number	Values you calculate with: Age, Marks, Quantity.
Date/Time	Date of birth, admission date, appointment time.
Currency	Fees, salary.
AutoNumber	Access fills a unique sequential number — excellent PK.

COMMON MISTAKE

Phone numbers look numeric but are Short Text. Leading zeros (0333...) would vanish in a Number field, and you never sum two phone numbers.

اردو میں سمجھیں

پہلے ٹیبل کا منصوبہ بنائیں۔ ڈیٹا شیٹ ویو تیز لیکن کمزور ہے؛ ڈیزائن ویو میں فیلڈ، ڈیٹا ٹائپ اور پرائمری کی خود منتخب کرتے ہیں۔ فون نمبر شارٹ ٹیکسٹ رکھیں۔

CHECK YOURSELF

1. Best data type for StudentID if you want Access to generate it?
2. Best data type for FeeAmount?

Answers: 1. AutoNumber. 2. Currency.
