4.10 Designing Forms for Data Manipulation

LEARN IT

A form is the screen people actually type into. It cuts errors and can show validation messages. Every form **must** have a data source — a table or a query. A form with no source has nowhere to save.

Form Wizard (the exam method):

1. Create tab → Form Wizard.
2. Select the table (e.g. Student).
3. Move fields with > (one) or >> (all).
4. Choose layout. **Columnar** = one record at a time, best for data entry.
5. Name it ("Student Registration") → Finish.

WORKED EXAMPLE

A Student Registration form shows Student ID (AutoNumber, locked), Full Name, Class, Department as labelled boxes, plus Save. The clerk never sees the raw datasheet and cannot accidentally overwrite the next row.

اردو میں سمجھیں

فارم اندراج کی سادہ اسکرین ہے۔ ہر فارم کسی ٹیبل یا کوئری سے جڑا ہوتا ہے۔ فارم وزرڈ سے ٹیبل چنائیں، فیلڈز منتخب کریں، کالم نما لے آؤں بہتر ہے، نام دے کر ختم کریں۔

CHECK YOURSELF

1. Can a form exist without a table or query?
2. Which layout is best for entering one student at a time?

Answers: 1. No — it needs a data source. 2. Columnar.
