3.1.6 Activity: Student Attendance System

LEARN IT

Teachers need a quick way to mark who is in class. This program stores names in a **list**, asks about each student, counts how many said yes, and prints a summary with `len()`.

Store names in a list → Ask present? for each → Count yes → Print totals

```
students = ["Ali", "Sara", "Ayesha"]
present_count = 0
print("--- Attendance System ---\n")
for student in students:
    status = input(f"Is {student} present? (yes/no): ").lower()
    if status == "yes":
        present_count += 1
print("\n--- Attendance Summary ---")
print("Total Students:", len(students))
print("Students Present:", present_count)
print("Students Absent:", len(students) - present_count)
```

WORKED EXAMPLE

Sample run. Ali yes, Sara no, Ayesha yes. `.lower()` means YES or Yes still counts as present.

OUTPUT

```
--- Attendance System ---

Is Ali present? (yes/no): yes
Is Sara present? (yes/no): no
Is Ayesha present? (yes/no): yes

--- Attendance Summary ---
Total Students: 3
Students Present: 2
Students Absent: 1
```

Student	Typed answer	After <code>.lower()</code>	<code>present_count</code>
Ali	yes	yes → add 1	1
Sara	no	not yes	1
Ayesha	yes	yes → add 1	2

Absent = `len(students) - present_count` = 3 - 2 = 1. The counter must start at 0 **before** the loop. If you put `present_count = 0` inside the loop, the count would reset for every student.

REMEMBER IT

Counter pattern: start at 0, loop, add 1 when a condition is true. You will reuse this in the word-frequency program (add 1 per word) and the grade tracker (add each mark).

COMMON MISTAKE

Only the exact string "yes" after `.lower()` counts as present. "y" or "present" is treated as absent. In a longer program you could also accept "y"; this activity keeps the rule simple.

اردو میں سمجھیں

حاضری کا پروگرام طلبہ کے نام ایک فہرست میں رکھتا ہے، ہر نام کے لیے پوچھتا ہے، اور yes پر شمار کار (Counter) ایک بڑھاتا ہے۔ کل طلبہ `len(students)` سے، غیر حاضر کل - حاضر سے نکلتے ہیں۔ شمار کار لوپ سے پہلے صفر ہونا چاہیے۔

CHECK YOURSELF

1. If all three students type no , what is printed for present and absent?
2. Why is `.lower()` used on the answer?

Answers: 1. Present 0, Absent 3. 2. So that YES, Yes and yes all match the string "yes".
