6.8 Minimum Viable Product (MVP) ★ Golden

LEARN IT

A **Minimum Viable Product (MVP)** is the **simplest working version** of a product. It includes **only the most important features** needed to **test the idea with real users**.

- **Minimum:** it has only the **essential** features. No extras.
- **Viable:** it is **usable enough** to actually solve the main problem. ("Viable" means able to work successfully.)

An MVP is **not the final product**. It is also **not only a drawing**. It is a **small working version** used to test whether users actually need the solution.

WORKED EXAMPLE

Example from the source: canteen app.

Complete canteen app (final product)	Canteen MVP
Login, online payment, delivery tracking, discount offers...	A simple Google Form where students select snacks before break.

Step-by-step: how to cut a big idea down to an MVP.

1. List all features you dream of: login, payment, delivery tracking, discounts.
2. Ask of each one: "Without this, can a student still pre-order a snack?"
3. Login? Not needed; the student can type name and class. Payment? Not needed; pay at the counter.
Delivery tracking? Not needed; students collect. Discounts? Not needed.
4. What is left is the core: **choose snack + name + class**. A Google Form does this for free.

That form is **minimum** (no extras) and **viable** (students really can pre-order with it).

REMEMBER IT

Simple meaning. An MVP answers: "**Will people actually use this solution?**" It tests **real use and behaviour**, not only the visual design.

Analogy: before opening a full restaurant, a cook in Hyderabad sells biryani from home to office workers for two weeks. If people keep ordering, the idea is worth growing. That home kitchen is the MVP.

COMMON MISTAKE

Mistake 1: Calling a paper sketch an MVP. **Fix:** A sketch is a prototype. An MVP must **work** and be used by **real users**.

Mistake 2: Thinking MVP means a low-quality or broken product. **Fix:** It is small but **viable**; it must genuinely solve the main problem.

ایم وی پی (Minimum Viable Product) کسی پراڈکٹ کا سب سے سادہ مگر کام کرنے والا ورژن ہے جس میں صرف ضروری خصوصیات ہوتی ہیں۔ "منیمم" کا مطلب ہے صرف ضروری چیزیں، اور "وائیبل" کا مطلب ہے کہ وہ اصل مسئلہ حل کرنے کے قابل ہو۔ یہ حتمی پراڈکٹ نہیں بلکہ یہ جانچنے کا ذریعہ ہے کہ کیا لوگ واقعی اسے استعمال کریں گے، جیسے کینٹین کے لیے ایک سادہ گوگل فارم۔

EXAM TIP

Typical questions: "What is an MVP? Explain the words Minimum and Viable" and "Give an example of an MVP." Write the full form, the definition (simplest working version, only most important features, test with real users), explain both words, state that it is neither the final product nor only a drawing, and give the canteen Google Form example. Mention the key question: "Will people actually use this solution?"

CHECK YOURSELF

1. Write the full form of MVP.
2. What does "Viable" mean in MVP?
3. What question does an MVP answer?

Answers: 1. Minimum Viable Product. 2. Usable enough to actually solve the main problem. 3. "Will people actually use this solution?"
